

```
package Stringprograms;

public class comparestrings_without_methods {

    public static void main(String[] args) {
        String s1="google";
        String s2="google";
        System.out.println("The given strings are :");
        System.out.println("s1 :"+s1);
        System.out.println("s2 :"+s2);
        if(s1.length()==s2.length()) {
            System.out.println("This s1 and s2 strings are equal");
        }
        else {
            System.out.println("Not equal");
        }

    }

}
```

output :

The given strings are :

s1 :google

s2 :google

This s1 and s2 strings are equal
