

```
package practice;

import java.util.Scanner;

public class numreverse {

    public static void main(String[] args) {
        Scanner sc =new Scanner(System.in);
        System.out.println("Enter the num");
        int num=sc.nextInt();
        int i=0;
        while(num!=0) {
            i=i*10 + num%10;
            num= num / 10;
        }
        System.out.println(i);
    }
}
```

output :  
Enter the num
