

```
package Stringprograms;

public class divide_5equalstring {

    public static void main(String[] args) {
        String s="abcdefghijklmnopqrstuvwx";

        if(s.length()%5==0) {
            System.out.println("The string divided into 5 and they are:");
            int startIndex=0;
            int endIndex=5;
            for (int i = 0; i < 5; i++) {
                //String s1 = s.substring(startIndex, endIndex);
                System.out.println(s.substring(startIndex, endIndex));
                // for(ss:s1)
                //System.out.println(s1);
                startIndex = endIndex;
                endIndex += 5;

            }
        }else {
            System.out.println("cannot divide the string");
        }
    }
}
```

output :

```
The string divided into 5 and they are:
abcde
fghij
klmno
pqrst
uvwxy
```
