

```
package practice;
```

```
import java.util.Scanner;
```

```
public class cubenumbers {
```

```
    public static void main(String[]args) {
```

```
        Scanner scan=new Scanner(System.in);
```

```
        System.out.println("ENTER THE NUMBER:");
```

```
        int num=scan.nextInt();
```

```
        for(int i=1;i<=num;i++) {
```

```
            System.out.println(i+"."+ "Number is :"+i+"and cube of "+i+" is :"+i*i*i);
```

```
        }
```

```
    }
```

```
}
```

output :

ENTER THE NUMBER:

4

1.Number is : 1 and cube of 1 is : 1

2.Number is : 2 and cube of 2 is : 8

3.Number is : 3 and cube of 3 is : 27

4.Number is : 4 and cube of 4 is : 64
