

```
package Stringprograms;

import java.util.Scanner;

public class String_builder_removechar {

    public static void main(String[] args) {
        StringBuilder s=new StringBuilder("dhamu");
        //s.append("d");
        System.out.println("before :"+s);
        System.out.println();
        System.out.println("After removed:");
        System.out.println(s.deleteCharAt(2));

        //Scanner sc=new Scanner(System.in);
        //System.out.println("Enter the character :");
        //String s1=sc.next();
        //String s1="dhamu";
        //String n=sc.next();
        //for(int i=0;i<=s1.length();i++) {
            //if(s1.charAt(i)!=n.charAt(i)){
                //System.out.println(s1);
            //}
        }
    }
}
```

## Output:

before :dhamu

After removed:  
dhmu
