```java
package Stringprograms;

import java.util.Scanner;

public class count_of_char {

    public static void main(String[] args) {
        String s="Dhamdharan";
        System.out.println("String name:"+s);
        Scanner sc=new Scanner(System.in);
        for(int j=1;j<=3;j++) {

            System.out.println("Enter the character to check the count :");

            char check=sc.next().charAt(0);

            int cnt=0;

            for(int i=0;i<s.length();i++) {

                if(s.charAt(i)==check) {
                    cnt++;
                }
            }
            System.out.println("The count for character '"+check+"' is
:"+cnt);

        }

    }

}
```

Output:

```
String name:Dhamdharan
Enter the character to check the count :
a
The count for character 'a' is :3
Enter the character to check the count :
d
The count for character 'd' is :1
Enter the character to check the count :
D
The count for character 'D' is :1
```
