```java
package execeptionhandling;

import java.util.Scanner;

public class Throws extends Exception {

public Throws(String num) {
    System.out.println("pin is "+"ici*********");
}
public static void   accountnum(String num) {
    String s1="*************";
    if(num.length()<s1.length()) {
        try {
            throw new Throws(num);
        }catch(Exception s) {
            System.out.println("check the Accountnumber,the num
should be 13 digits");
        }
    }
}

    public static void main(String[] args) {
        Scanner s=new Scanner(System.in);
        System.out.println("Enter the Account number:");
    String num=s.nextLine();
        accountnum(num);

    }

}
```

Output:

```
Enter the Account number:
icici13456
pin is ici*********
check the Accountnumber,the num should  be 13 digits
```
